

# PIGLET SAVER

SUPPELEMENTARY LIQUID FEED FOR SMALL BORN AND WEAK PIGLETS

**One bottle of Piglet saver will treat 125 piglets.**

**DOSAGE:**

**2mls per piglet**

-1ml at birth

-1ml 12 hours later

***Benefits:***

- Lower preweaning piglet mortality
- More lively piglets
- Better suckling reflex
- One saved piglet pays for the bottle

# Up to 50% reduction in mortality rates pre weaning

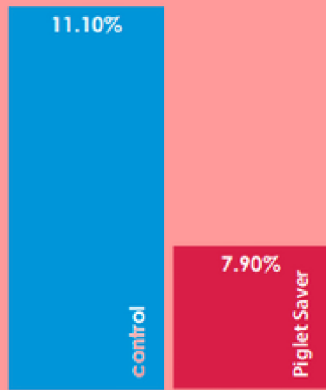

Piglet Saver is a unique nutritional initiative that compensates for the negative effects of low birth weights, by increasing the ability of the piglet to utilize energy from the sows milk.

Pigs with low birth weight have a reduced number of growth hormone receptors, which leads to a reduced production of the growth hormone IGF-1. Piglet Saver stimulates the formation of growth hormone receptors and thus raising the IGF-1 in serum among runt pigs to a normal level. With a normal level of IGF-1 the runt pigs are better to make use of the energy in the milk from the sow.

Piglet Saver increases the immunity of the pigs and restarts the pig, so that the pig is better prepared to handle infections and stress.

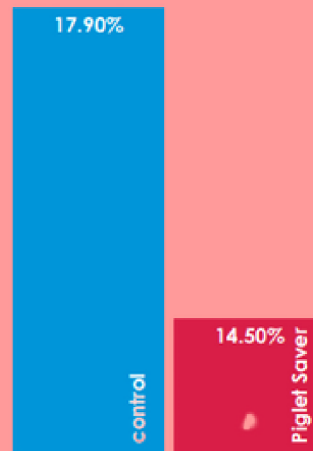

Preweaning mortality

29 % better preweaning survivability

Preweaning mortality

19% better preweaning survivability
